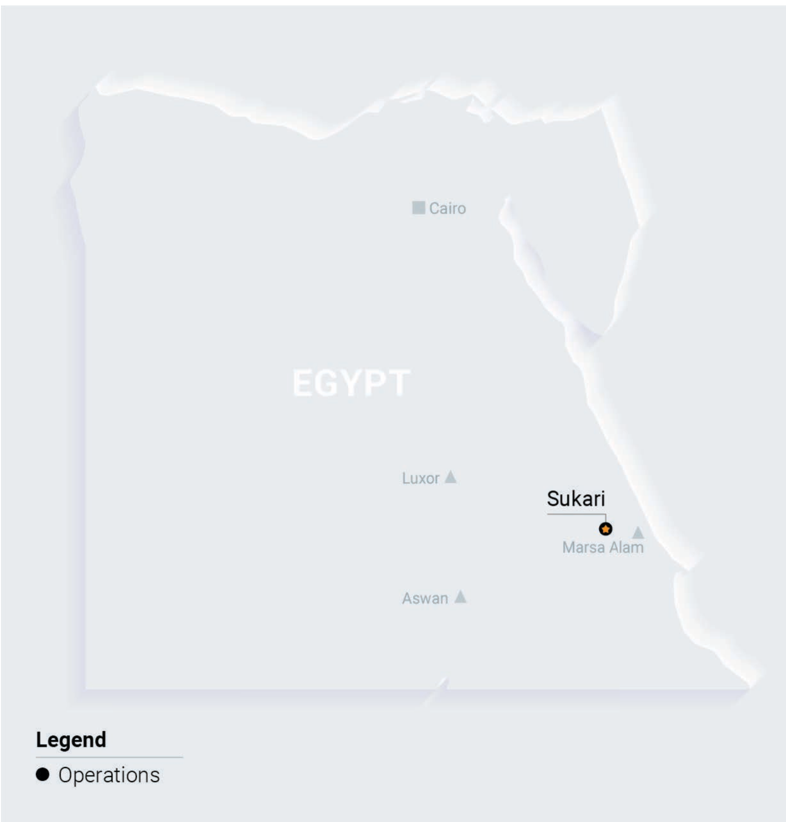
Operational profile 2025

Sukari

Africa

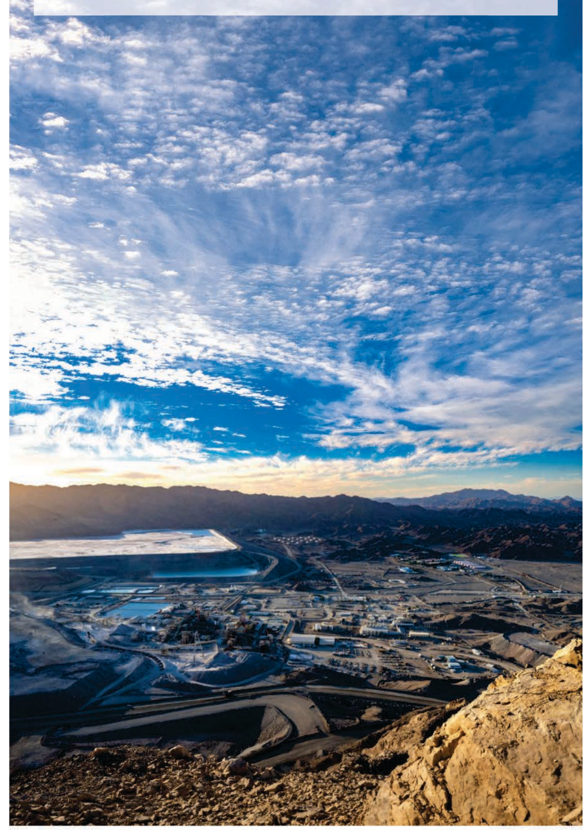
Sukari is one of six AngloGold Ashanti operations in Africa



AngloGold Ashanti acquired the Sukari gold mine in Egypt through the acquisition of Centamin plc in November 2024. Sukari is owned in partnership with the Egyptian Government.

Sukari is located approximately 750km from Cairo and 25km from Marsa Alam on the Red Sea. First gold was poured in June 2009 and commercial production began in April 2010, making Sukari the first modern gold mine in Egypt, a country which in ancient times was a prolific producer of the precious metal.
Sukari conducts both open-pit and underground mining operations, each employing specialised mining methods tailored to the orebody characteristics and operational requirements.

The 12Mtpa processing plant features crushing, grinding, flotation and CIL circuits.



Gold produced
500,000oz

(2024: 40,000oz)

Restatements

Ongoing improvements to our data collection systems and measurement methodologies can result in restatements of previously reported data. Restatements of information will be provided when a change in measurement methodology or an error in previously reported information results in the potential to influence a users' decision-making. Restatements will also be provided if there are significant changes in reporting parameters (e.g., mergers, acquisitions, divestments, etc.). Such restatements are included as footnotes where applicable.

Operational profile 2025

Iduapriem

Africa

Iduapriem is one of two AngloGold Ashanti operations in Ghana, and one of six in Africa.

Iduapriem is located in the Western region of Ghana, some 70km north of the coastal city of Takoradi and approximately 10km southwest of the town of Tarkwa.

The mine is a multiple open pit operation with a three-stage crushing circuit and CIL processing plant.

Operational profile 2025

Obuasi

Africa

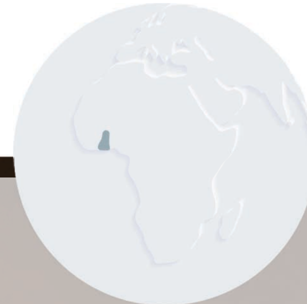
Obuasi is one of two AngloGold Ashanti operations in Ghana, and one of six in Africa.

Gold produced
266,000oz
(2024: 221,000oz)

Mineral Reserve [(1)]
7.06Moz
at 31 December 2025
(31 December 2024: 6.75Moz)

All-in sustaining cost
$2,026/oz
(2024: $1,942/oz)

Capital expenditure
$209m
(2024: $202m)



Obuasi is located in the Ashanti region of Ghana, approximately 60km south of Kumasi. Mining operations are primarily underground to a depth of 1,500m.

Following approval from the Government of Ghana, the Obuasi redevelopment project began in late 2018. Completion of phases 1 and 2 of the project took ore production capacity to 4,000tpd by mid-2022 with infrastructure including a 2.2Mtpa processing plant.

Phase 3 was successfully completed in late 2024, delivering the infrastructure to support a further ramp-up in ore production capacity.

A hybrid mining approach was embedded in 2025, combining underhand drift and fill (UHDF) methods for higher grade areas with poor ground conditions, with conventional sub-level open stoping (SLOS) for lower grade areas with more stable ground conditions.

Operational profile 2025

Siguiri

Africa

Siguiri in Guinea is one of six AngloGold Ashanti operations in Africa.

Siguiri is a multiple open-pit gold mine around 850km north-east of Guinea's capital, Conakry. AngloGold Ashanti holds an 85% interest in the operation with the remaining 15% held in trust for the nation by the Government of Guinea.

The mined ore is processed using an upgraded CIL plant that can treat up to 50% fresh rock and 50% soft ore, resulting in a total throughput of 11.8Mtpa. Siguiri is contractor-mined using conventional open-pit techniques.

Operational profile 2025

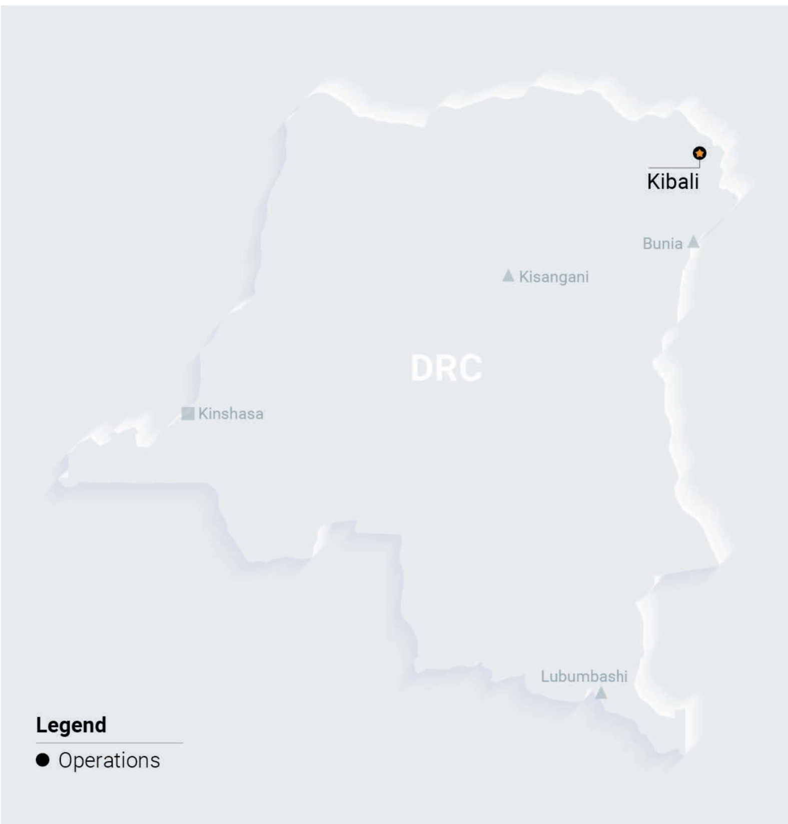
Kibali

Africa

One of six AngloGold Ashanti operations in Africa



Gold produced
303,000oz

(2024: 309,000oz)

Mineral Reserve (attributable) (1)
4.81Moz
at 31 December 2025

(31 December 2024: 4.57Moz)

All-in sustaining cost
$1,317/oz

(2024: $1,146/oz)

Capital expenditure
$151m

(2024: $125m)

Kibali, one of the largest gold mines (by production) of its kind in Africa, is situated adjacent to the village of Doko, 150 km west of the Ugandan border town of Arua. Kibali is co-owned in a joint venture by AngloGold Ashanti (45%), Barrick Mining Corporation (45%) and Société Minière de Kilo-Moto S.A. (SOKIMO) (10%), which represents the interest of the DRC government.

Barrick manages and operates the mine which has both open-pit and underground operations.

The metallurgical plant comprises a twin-circuit sulphide and oxide plant with conventional carbon-in-leach (CIL), including gravity recovery as well as a float and ultra-fine grind circuit.

Operational profile 2025

AGA Mineração

Americas

AGA Mineração is currently one of two AngloGold Ashanti operations in the Americas region.

Gold produced
273,000oz
(2024: 271,000oz)

Mineral Reserve [1]
1.86Moz
at 31 December 2025
(31 December 2024: 1.62Moz)

All-in sustaining cost
$1,506/oz
(2024: $1,334/oz)

Capital expenditure
$135m
(2024: $98m)

AGA Mineração comprises the Cuiabá and Lamego mining operations, and the Córrego do Sítio (CdS) site, which is on care and maintenance, in southeastern Brazil, in the state of Minas Gerais.

The Cuiabá and Lamego operations are 30km from the state capital (Belo Horizonte) while CdS is around 100km away. The Cuiabá mining complex, which includes the Cuiabá and Lamego underground mines and Cuiabá and Queiroz plants, has been in operation for over 30 years and Lamego for 10 years.

The Cuiabá mine has changed from cut-and-fill to sub-level stoping, increasing the contribution from narrow-vein orebodies to the mine's total production and improving rock-engineering controls related to support, design and monitoring.

Ore from the Cuiabá and Lamego mines is processed at the Cuiabá gold plant. The concentrate produced is transported by aerial ropeway to the Queiroz plant for processing and refining. Total annual capacity of the complete Cuiabá circuit is 1.75Mt. Operations at the Queiroz metallurgical plant, which were suspended in 2023, resumed during the course of 2024.

The CdS complex, comprising an open-pit mine and an underground mine, remains on care and maintenance.

(2) *Includes gold concentrate from the Cuiabá mine sold to third parties*
(3) *Data for 2023 have been adjusted to exclude the Córrego do Sítio (CdS) operation that was placed on care and maintenance in August 2023*
(4) *"Payments to Government" data included has not been calculated using the same methodology as the information which will be disclosed by AngloGold Ashanti in its 2025 Resource Extraction Payment Report to be filed on Form SD with the U.S. Securities and Exchange Commission ("SEC") pursuant to the SEC's rules on disclosure of payments to governments by resource extraction issuers. "Payments to Government" data herein has been calculated in accordance with the GRI Framework Guidelines.*

Restatements

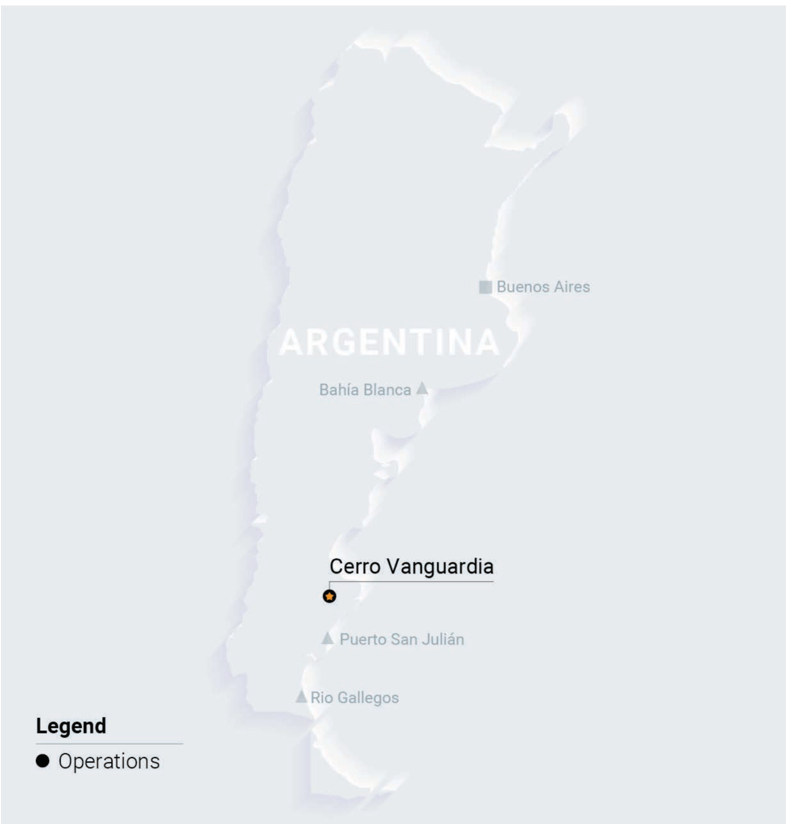
Ongoing improvements to our data collection systems and measurement methodologies can result in restatements of previously reported data. Restatements of information will be provided when a change in measurement methodology or an error in previously reported information results in the potential to influence a users' decision-making. Restatements will also be provided if there are significant changes in reporting parameters (e.g., mergers, acquisitions, divestments, etc.). Such restatements are included as footnotes where applicable.

Operational profile 2025

Cerro Vanguardia

Americas

Cerro Vanguardia is currently one of two AngloGold Ashanti operations in the Americas.



Cerro Vanguardia, in which AngloGold Ashanti has a 92.5% stake, is the Company's sole operation in Argentina. Fomicruz SE, a state company, owns the remaining 7.5%.

The operation is in the province of Santa Cruz and operates multiple small open pits with high stripping ratios and multiple narrow-vein underground mines that produce gold with silver as a by-product.

The metallurgical plant has a daily capacity estimated at 3,500tpd (1.2Mtpa). In addition to the processing plant there is a heap leach pad with an annual capacity of 2Mtpa.

Gold produced
179,000oz
(2024: 175,000oz)

Mineral Reserve (attributable) [1]

Operational profile 2025

Sunrise Dam

Australia

One of two AngloGold Ashanti operations in the northeastern goldfields of the state of Western Australia

Gold produced
232,000oz
(2024: 259,000oz)

Mineral Reserve [1]
1.00Moz
at 31 December 2025
(31 December 2024: 0.97Moz)

All-in sustaining cost
$2,078/oz
(2024: $1,665/oz)

Capital expenditure
$87m
(2024: $65m)

Wholly owned by AngloGold Ashanti, Sunrise Dam is located some 205km north-northeast of Kalgoorlie and 55km south of Laverton in Western Australia.

Underground mining, carried out by contract mining company Barminco, is the primary source of ore, supplemented by satellite open pit ore.

Mining of the Golden Delicious pit was completed in 2023 by indigenous mining contractor Carey Mining, which was then awarded a new four-year contract to mine a further three satellite open pits.

Processing at Sunrise Dam is via a conventional three-stage crushing / two-stage ball milling, pyrite flotation and ultrafine grinding and CIL circuit. The gravity circuit recovers approximately 30% of the gold, with the CIL circuit, used to recover the remainder. Plant throughput at Sunrise Dam is approximately 4.1Mtpa.

Operational profile 2025

Tropicana

Australia

One of two AngloGold Ashanti operations in the northeastern goldfields of the state of Western Australia

Tropicana is a joint venture between AngloGold Ashanti (70%), as operator, and AFB Resources (Pty) Limited, a subsidiary of Regis Resources Limited (30%).

The operation is located 330km northeast of Kalgoorlie and 200km east of Laverton in the state of Western Australia.

Tropicana is a large open-pit operation, with a growing underground mining component. The site's first underground mine beneath the Boston Shaker pit began production in September 2020 and was followed by the Tropicana underground mine. The Havana underground mine is scheduled to begin ore production in the first half of 2027.

Open pit and underground mining activities are carried out by mining contractor Macmahon Holdings.

The processing plant has a capacity of 9.4Mtpa.

A large renewable energy facility was completed at the site in early 2025.
